FREIGHTSCAN

DELIVERING THE NEXT DIMENSION OF CARGO VALUE

DHL Awards FreightScan Contract for *FS100* Cargo Dimensioning System
- Revolutionary FS100 Automated Cargo Scanning System to be Installed in DHL MIA Facility -

Solana Beach, California, December 3, 2008 – FreightScan, LLC, a leader in the development and deployment of innovative technology solutions for the freight and logistics industry, has received a contract from DHL Aviation Americas for the installation of a new automated *FS100* cargo scanning system.

The contract calls for the installation of one *FS100* automated dimensioning system to be installed at the DHL Aviation Americas facility at the Miami International Airport (MIA) in February 2009, where one unit will be capable of scanning 100 percent of its cargo shipments. Based upon the results provided by that system, several additional units are scheduled to be installed later in 2009, at designated air cargo facilities within DHL's Latin America network. The DHL Aviation Americas division will be using the *FS100* systems to identify accurate dim weight of its shipments, as well as using the visual record the *FS100* produces for claims management.

"This new contract comes just 90 days after we completed an on-site evaluation of the *FS100* system at DHL's Miami facility," said André Johnson, CEO of FreightScan. "DHL found the results of the evaluation to be extremely positive, providing benefits that included both increased revenue and manpower savings with no disruption to existing workflow. The MIA staff was excellent to work with, and DHL Aviation Americas is a great example of how forward thinking executive leadership with an open mind to technology can bring in innovative solutions to improve the bottom line. We look forward to an ongoing relationship with DHL, and delivering substantial value to their organization."

"Our team was very impressed with FreightScan's automated dimensioning system," said Reiner Wolfs, Vice President of Aviation Operations for DHL. "During our evaluation of the *FS100* system, we identified significant potential for facilitating and streamlining the process of collecting dimensional weight data. The ability to easily integrate the automated unit with our existing data capture applications, combined with the ease of use of the *FS100* scanner itself, resulted in superior accuracy of data captured, and this at a far faster pace. Our staff found the system easy to operate, and the reaction was positive from the warehouse agents on the floor through to management. We anticipate numerous benefits from installing the *FS100* at our MIA facility."

“We often find that the implementation process for an *FS100* system causes cargo operations to standardize dimensioning cargo with unexpected ease,” added Johnson. “By automating the collection of dims, particularly if the system is installed over a scale, warehouse agents can capture dimensional weight in seconds – which provides a great improvement over the current manual process that is both time-consuming and often inaccurate. In turn, by utilizing the *FS100* units, our customers realize substantial ROI with very little capital investment.”

Delivering unprecedented ease of deployment, the *FreightScan FS100* system is compact and installs virtually anywhere in a warehouse, 15 feet off the floor, streamlining the dimming process, improving yield and maximizing warehouse resources. It is capable of scanning a one-lot shipment in seconds, and a multi-lot shipment in four to six seconds, delivering individual dims for each package to within one inch of accuracy.

ABOUT DHL

DHL is the global market leader of the international express and logistics industry, specializing in providing innovative and customized solutions from a single source.

DHL offers expertise in express, air and ocean freight, overland transport, contract logistic solutions as well as international mail services, combined with worldwide coverage and an in-depth understanding of local markets. DHL's international network links more than 220 countries and territories worldwide. Some 300,000 employees are dedicated to providing fast and reliable services that exceed customers' expectations. DHL is a Deutsche Post World Net brand. The group generated revenues of more than 63 bn euros in 2007.

ABOUT FREIGHTSCAN

FreightScan, LLC is a leader in the development and deployment of innovative technology solutions for the freight and logistics industry. Its groundbreaking automated dimensioning systems include the *FreightScan FS100*, an overhead scanner, and the *FL1000*, the world's first forklift mounted scanner.

Utilizing revolutionary D.I.M.M. Tech™ (Defined Imaging and Multiple Measurement Technology), the *FS100* and *FL1000* have the capability to scan cargo in all configurations within seconds, providing companies with the ability to maximize warehouse resources, establish accurate billings and significantly improve revenues and profit performance. FreightScan has also recently introduced CargoVizion, a cargo screening system that works in conjunction with the flagship *FS100* to provide non-radiation technology for screening cargo at the pallet level. Logistics industry segments it serves include air freight, ground freight, rail freight, sea freight, multimodal transportation and container logistics.
