FREIGHTSCAN

DELIVERING THE NEXT DIMENSION OF CARGO VALUE

**FreightScan to Demonstrate Suite of Scanning and Security Systems
Live At IATA World Cargo Symposium in Bangkok, March 2-5, 2009**

*- Will Hold Live Demonstrations of its FS100 Automated Dimensioning System, CargoVizion™
and the World's First Forklift-Mounted Scanner, the FL1000 -*

Carlsbad, California, February 24, 2009 – FreightScan, LLC, a leader in the development and deployment of innovative technology solutions for the freight and logistics industry, will be conducting live, hands-on interactive booth demonstrations of its full suite of cargo products, including the groundbreaking automated dimensioning system, the *FS100*, a next generation security screening system, *CargoVizion™*, and the world's first forklift-mounted dimensioning scanner, the *FL1000*, at the IATA World Cargo Symposium in Bangkok, Thailand, March 2-5, 2009. The event will be held at the Bangkok Convention Center of Centara World; FreightScan will be located in booth #5.

FreightScan's *FS100* automated cargo dimensioning system is a small scanner that creates value by automating the process of capturing measurements and calculating dimensional weight without interrupting workflow. It exceeds all existing standards for static dimming systems in the cargo industry. The non-radiation cargo screening system, *CargoVizion*, attaches to the *FS100* and provides a method for detecting and locating potential threat objects and materials at the same time that the *FS100* is maximizing profits. *CargoVizion* screens 100 percent of cargo, identifying elevated risk shipments for inspection in seconds. FreightScan's revolutionary *FL1000* mounts directly to the mast assembly of a forklift and scans freight on a standard 48" x 40" skid up to 60" high at any location within a cargo facility loading dock or warehouse while the freight is still on the forklift.

FreightScan's product suite has been met with broad recognition as providing innovative technology solutions for the cargo industry, and this year's IATA conference will be the first time that *CargoVizion* will be demonstrated live for attendees, including media.

"We have received a great deal of interest in *CargoVizion* as a new security product available to the industry to meet the 2010 deadline for screening 100 percent of cargo transported on passenger planes, and this year we are excited to offer a live demonstration to the public for the first time," said André Johnson, CEO of FreightScan. "We have designed an interactive experience that will illustrate how effectively and efficiently *CargoVizion* screens cargo, even in a space-constrained 20-foot booth. In addition, we want to demonstrate how FreightScan's suite of products helps cargo facilities to

- more -

dramatically increase revenues, and resolves the myriad of workflow issues that restrict cargo facilities utilizing cross-docking, multi-scales or have other warehouse constraints from implementing 100 percent dimensioning of their cargo. We look forward to the upcoming IATA World Cargo Symposium with great anticipation.”

ABOUT FREIGHTSCAN

FreightScan, LLC is a leader in the development and deployment of innovative technology solutions for the freight and logistics industry. Its groundbreaking automated dimensioning systems include the *FreightScan FS100*, an overhead scanner, and the *FL1000*, the world's first forklift-mounted scanner.

Utilizing revolutionary D.I.M.M. Tech™ (Defined Imaging and Multiple Measurement Technology), the *FS100* and *FL1000* have the capability to scan cargo in all configurations within seconds, providing companies with the ability to maximize warehouse resources, establish accurate billings and significantly improve revenues and profit performance. FreightScan has also recently introduced CargoVizion™, a cargo screening system that provides non-radiation technology for detecting and locating potential threat objects and materials. Logistics industry segments it serves include air freight, ground freight, rail freight, sea freight, multimodal transportation and container logistics.
