

FreightScan Releases *DimPro 2.0* Software for Cargo Scanning Systems

- Company Enhances its Automated Dimensioning Systems and Adds Global Sentry Feature -

Carlsbad, California, April 14, 2009 – FreightScan, LLC, a leader in the development and deployment of innovative technology solutions for the freight and logistics industry, announced it has integrated an advanced software system, *DimPro 2.0*, into the automated dimensioning system for its suite of cargo scanning products, which includes the *FS100* and *FL1000*.

DimPro 2.0 is an updated version of the original software application, *DimGen 1.8*, which powered the *FS100* scanning unit when it was launched in November 2007 and the *FL1000* when it debuted in November 2008. *DimPro 2.0*, which now drives both systems, is a more powerful software application, enabling customers to capture, record, display and transfer dimensions and images associated with shipment waybills. The new software also features *Global Sentry*, a powerful Web-based remote monitoring module that constantly analyzes, diagnoses and updates *FS100* and *FL1000* systems in use by customers worldwide. *DimPro 2.0* offers a vastly streamlined client interface for ease of use and reduces the training time for a FreightScan system to one hour or less.

"With this software upgrade and the addition of *Global Sentry*, FreightScan is positioned to offer the highest level of service to its global customers. We are now able to monitor each installed unit from an engineering center at our headquarters facility in Carlsbad, California, and instantly access any system in minutes to make repairs," said Randy Richards, Executive Vice President - Sales and Service for FreightScan. "For example, one of our installed *FS100* units at Heathrow Airport in London encountered a printing issue. The on-site warehouse agent called in and reported the incident. The agent then went to the lunch cart outside the dock, and by the time he returned, FreightScan had resolved the issue remotely. The customer was amazed that we could act that fast and without the need for any of their resources; there was no downtime, and no personnel required on their part."

FreightScan's *FS100* automated cargo dimensioning system is a small overhead scanner that creates value by automating the process of capturing measurements and calculating dimensional weight without interrupting workflow. The *FS100* dimensions all cargo from small boxes to pallets in 4.0 seconds, increasing warehouse efficiency and maximizing revenue control. FreightScan's revolutionary *FL1000* mounts directly to the mast assembly of a forklift and scans freight at any location within a cargo facility loading dock or warehouse while the freight is still on the forklift.

“FreightScan has been working with major players in all modes of transportation, and our worldwide network of our customers demands a global approach to service and support,” said Richards. “DimPro 2.0 delivers an ease of use, both initially and ongoing, that will improve operations and profitability for cargo companies using FreightScan’s products from day one.”

ABOUT FREIGHTSCAN

FreightScan, LLC is a leader in the development and deployment of innovative technology solutions for the freight and logistics industry. Its groundbreaking automated dimensioning systems include the *FreightScan FS100*, an overhead scanner, and the *FL1000*, the world’s first forklift-mounted scanner.

Utilizing revolutionary D.I.M.M. Tech™ (Defined Imaging and Multiple Measurement Technology), the *FS100* and *FL1000* have the capability to scan cargo in all configurations within seconds, providing companies with the ability to maximize warehouse resources, establish accurate billings and significantly improve revenues and profit performance. FreightScan has also recently introduced CargoVizion™, a cargo screening system that provides non-radiation technology for detecting and locating potential threat objects and materials. Logistics industry segments it serves include air freight, ground freight, rail freight, sea freight, multimodal transportation and container logistics.
