

## **FreightScan to Demonstrate Automated Cargo Dimensioning and Security Products at CNS Partnership Conference 2009**

*- To Provide Live Demonstrations of Solutions that Increase Profits for Cargo Operations -*

**Carlsbad, California, April 23, 2009** – FreightScan, LLC, a leader in the development and deployment of innovative business solutions for the freight industry, will be conducting live, interactive booth demonstrations of its cargo scanning and screening products at the CNS Partnership Conference, to be held May 3-5, 2009, at the La Costa Resort and Spa in Carlsbad, CA, USA. The FreightScan team will be demonstrating its groundbreaking automated dimensioning system, the *FS100*, and a next generation security screening system, *CargoVizion*<sup>™</sup>.

“During slow economic times, it is more important than ever to demonstrate that it is possible for cargo companies to increase profits, and we believe automated dimensioning can be a key contributor,” said Randy Richards, Executive Vice President – Sales and Service of FreightScan. “Visitors to our booth will not only witness how easy it is to implement 100 percent dimensioning of cargo for increased revenues and efficiencies, but also observe the turnkey solution that FreightScan provides cargo companies that enables them to screen, dim, reweigh and image every shipment in seconds. Most viewers of these demonstrations will have never seen anything like these products in person, and they will be very impressed by the very real prospects for improving their own cargo operations and profit performance.”

FreightScan's *FS100* automated cargo dimensioning system is a small overhead scanner that creates value by automating the process of capturing measurements and calculating dimensional weight without interrupting workflow. The non-radiation cargo screening system, *CargoVizion*, attaches to the *FS100* and provides a method for detecting and locating potential threat objects and materials at the same time that the *FS100* is maximizing profits. *CargoVizion* screens 100 percent of cargo, identifying elevated risk shipments for inspection in seconds.

“We have received a great deal of interest in *CargoVizion* as a new security product available to the industry to meet the 2010 deadline for screening 100 percent of cargo transported on passenger planes and we are excited to offer live demonstrations to the public for the first time,” said André Johnson, CEO of FreightScan. “We are passionate about delivering practical solutions to the industry that have a meaningful impact on the bottom line. We look forward to the upcoming CNS Partnership Conference and invite everyone attending to join us as we demonstrate the effectiveness of our products.”

## **ABOUT FREIGHTSCAN**

FreightScan, LLC is a leader in the development and deployment of innovative technology solutions for the freight and logistics industry. Its groundbreaking *FreightScan FS100* system exceeds all existing standards for static dimming systems. Utilizing revolutionary D.I.M.M. Tech™ (Defined Imaging and Multiple Measurement Technology), the *FS100* has the capability to scan cargo in all configurations within seconds, providing companies with the ability to maximize warehouse resources, establish accurate billings, and significantly improve revenues and profit performance. FreightScan has also recently introduced two security related products that work in conjunction with the flagship *FS100* system: *FAST* is a tamper detection system which creates a unique "Package DNA" for every piece of a shipment that can be monitored as it moves through the supply chain; and *CargoVizion™* is the next generation of look-inside-the-box security screening technology. Logistics industry segments it serves include air freight, ground freight, rail freight, sea freight, multimodal transportation and container logistics.
