DELIVERING THE NEXT DIMENSION OF CARGO VALUE

**Worldwide Flight Services Evaluates FreightScan's Dimensioning System**  
*- Revolutionary FS100 Automated Cargo Scanning System Installed in WFS DFW Facility -*

**Carlsbad, California, August 4, 2009** – FreightScan, LLC, a leader in the development and deployment of innovative technology solutions for the freight and logistics industry, has begun an evaluation with Worldwide Flight Services (WFS) for the automated *FS100* cargo scanning system.

The evaluation calls for the installation of one *FS100* automated dimensioning system at the Dallas Fort Worth airport cargo facility of World Flight Services, which handles cargo for airlines including KLM/Airfrance Cargo, Air Canada, US Airways, and China Cargo. Based upon the results of the evaluation, WFS is considering a permanent installation of *FS100* systems at Dallas Fort Worth, as well as various locations within its global network. WFS will be using the *FS100* system to identify accurate dim weight of the shipments it handles, as well as making the visual record the *FS100* produces available to the air carriers it handles.

“We are very excited about the opportunity to work with one of the largest cargo handlers in the world to demonstrate the efficiency of using FreightScan's *FS100* to dimension 100 percent of outbound cargo,” said Randy Richards, Executive Vice President of Sales for FreightScan. “The results thus far have been extremely positive, providing benefits that include both accurate chargeable weight and significant manpower savings with no disruption to existing workflow. The WFS leadership and staff have been outstanding to work with, and the Dallas Fort Worth facility is very representative of how the *FS100* can create value for cargo handlers around the world.”

“Our team has been impressed with FreightScan's automated dimensioning system,” said Bill Payne, Regional Director for Worldwide Flight Services. “The product is simple to operate, fast and accurate. For the evaluation at our DFW facility we opted to install the *FS100* system over our 10' x 10' floor scale so we could dimension the cargo at the same time as the reweigh. One of the most intriguing features of the system is the ability to dimension four pieces of cargo with a single scan as well as providing a photo image of cargo. This has proved to be a very efficient process, and we are encouraged by the initial results of the evaluation. We are also eager to integrate the security screening capability once approved by the TSA.”

Delivering unprecedented ease of deployment, the FreightScan *FS100* system is compact and installs virtually anywhere in a warehouse, 15 feet off the floor, streamlining the dimming process, improving yield and maximizing warehouse resources. The system captures accurate dimensions of cargo in seconds, and creates a retrievable data record for each waybill including dimensions, scan images and digital photos.

#### **ABOUT WORLDWIDE FLIGHT SERVICES**

Worldwide Flight Services (WFS) is an industry leading, independent provider of quality airport services. Each year, WFS handles more than 3.5 million tons of cargo and serves 50 million passengers for airlines, with over 14,000 employees serving 120 locations throughout North America, Europe Asia and the Caribbean. In the competitiveness of the airline industry, WFS has answered the increasing demand for responsive top-quality services tailored to individual customer needs. WFS currently works with over 300 airlines and airport authorities around the world and is positioned to promptly and professionally handle any airport service needed from almost anywhere in the world.

#### **ABOUT FREIGHTSCAN**

FreightScan, LLC is a leader in the development and deployment of innovative technology solutions for the freight and logistics industry. Its groundbreaking automated dimensioning systems include the *FreightScan FS100*, an overhead scanner, and the *FL1000*, the world's first forklift mounted scanner.

Utilizing revolutionary D.I.M.M. Tech™ (Defined Imaging and Multiple Measurement Technology), the *FS100* and *FL1000* have the capability to scan cargo in all configurations within seconds, providing companies with the ability to maximize warehouse resources, establish accurate billings, and significantly improve revenues and profit performance. FreightScan has also recently introduced a security related product that works in conjunction with the flagship *FS100* system: *CargoVizion™* is the next generation of look-inside-the-box security screening technology. Logistics industry segments it serves include air freight, ground freight, rail freight, sea freight, multimodal transportation and container logistics.
