DELIVERING THE NEXT DIMENSION OF CARGO VALUE

## **FreightScan Receives Contract For Installation of *FS100* Dimensioning System From Worldwide Flight Services**

*- FS100 Automated Cargo Dimensioning System Installed in WFS DFW Facility -*

**Carlsbad, California, November 18, 2009** – FreightScan, LLC, a leader in the development and deployment of innovative technology solutions for the freight and logistics industry, announced it has received a contract to permanently install an *FS100* automated system for cargo dimensioning at the Worldwide Flight Services (WFS) cargo facility at the Dallas Fort Worth Airport following a successful three-month evaluation process.

This permanent installation for Worldwide Flight Services, which handles cargo on behalf of many airline carriers, came as a result of a successful evaluation that began in mid-August at the DFW location. The *FS100* enables WFS to identify accurate dim weight of the shipments it handles and creates a visual record that is made available to the air carriers it represents.

“We are very pleased our evaluation process went well for WFS and that we've received a contract for a permanent installation at DFW,” said Randy Richards, Executive Vice President of Sales for FreightScan. “This first installation for WFS provides us the opportunity to work with one of the largest and best cargo handlers in the world, with an outstanding management team. The Dallas Fort Worth facility is very representative of how the *FS100* can create value for cargo handlers around the world by providing both accurate chargeable weight and a significant savings in manpower with no disruption to existing workflow.”

“Our team was very impressed with the results of FreightScan’s automated dimensioning system during our evaluation period,” said Bill Payne, Managing Director for Worldwide Flight Services. “The *FS100* is simple to operate, fast and very accurate. At our DFW facility, we opted to install the *FS100* system above our 10’ x 10’ floor scale so we could dimension the cargo at the same time we perform the reweigh. One of the most intriguing features of the *FS100* system is its ability to dimension multiple pieces of cargo with a single scan. We have captured individual dimensions for up to eleven pieces of cargo in less than ten seconds with this feature. This has proved to be a very efficient process for us and we look forward to achieving excellent operational cost-savings with this installation.”

Delivering unprecedented ease of deployment, the FreightScan *FS100* system is compact and installs virtually anywhere in a warehouse, 15 feet off the floor, streamlining the dimming process, improving yield and maximizing warehouse resources. The system captures accurate dimensions of cargo in seconds, and creates a retrievable data record for each waybill including dimensions, scan images and digital photos.

## **ABOUT WORLDWIDE FLIGHT SERVICES**

Worldwide Flight Services (WFS) is an industry leading, independent provider of quality airport services. Each year, WFS handles more than 3.5 million tons of cargo and serves 50 million passengers for airlines, with over 14,000 employees serving 120 locations throughout North America, Europe Asia and the Caribbean. In the competitiveness of the airline industry, WFS has answered the increasing demand for responsive top-quality services tailored to individual customer needs. WFS currently works with over 300 airlines and airport authorities around the world and is positioned to promptly and professionally handle any airport service needed from almost anywhere in the world.

## **ABOUT FREIGHTSCAN**

FreightScan, LLC is a leader in the development and deployment of innovative technology solutions for the freight and logistics industry. Its groundbreaking automated dimensioning systems include the *FreightScan FS100*, an overhead scanner, and the *FL1000*, the world's first forklift mounted scanner.

Utilizing revolutionary D.I.M.M. Tech™ (Defined Imaging and Multiple Measurement Technology), the *FS100* and *FL1000* have the capability to scan cargo in all configurations within seconds, providing companies with the ability to maximize warehouse resources, establish accurate billings, and significantly improve revenues and profit performance. FreightScan has also recently introduced a security related product that works in conjunction with the flagship *FS100* system: *CargoVizion™* is the next generation of look-inside-the-box security screening technology. Logistics industry segments it serves include air freight, ground freight, rail freight, sea freight, multimodal transportation and container logistics.
